

I-CAN: Completing a Self-Check (based on the Mental Health Continuum)

Disclaimer: The Self-Check is a voluntary tool that provides a private/confidential snapshot of your mental health across five domains. It is intended for self-reflection and to assist in navigating the range of resources available to you. It does not replace professional medical advice or CAF policy, nor does it require the sharing of results. The physical symptoms listed give examples of how mental health can manifest in the body; however, they do not account for all medical conditions or injuries.

Categorizing resources by intensity is intended to simplify their navigation, and does not restrict your access to any level of support along the continuum. You are encouraged to access the care that feels right for you, regardless of your self-check results, if any condition is affecting your wellbeing or functioning.

Steps:

1. **CHECK: I notice and get a snapshot.**

The CHECK step helps you notice mental health patterns as they appear in six domains of health (physical, mental, emotional, social, spiritual, and substance use and addictive behaviors) and map them against the four colours of the Mental Health Continuum (MHC).

These categories are not medical diagnoses, and the examples provided are not exhaustive. They offer a practical way to see how often, and how strongly, these patterns show up and impact your daily life.

2. **ASSESS: I explore what's standing out.**

This step is an invitation to explore what your 'check' means to you by reflecting on patterns, shifts, and possible root causes.

Reflective Prompts:

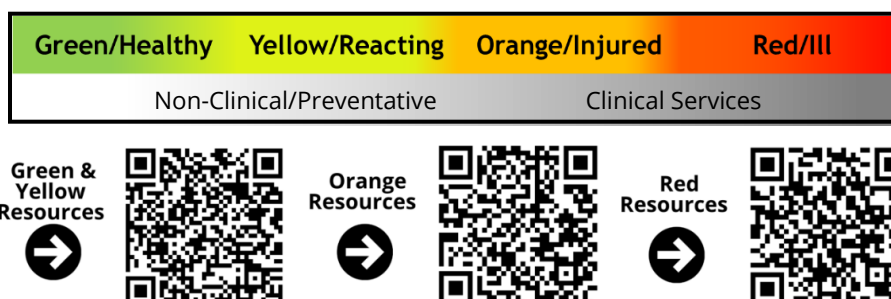

- **What stands out?**
Are there specific questions or domains leaning towards orange or red?
- **What is the context?**
Is this a temporary reaction to a passing event, or is it an ongoing pattern you've been experiencing?
- **Can you identify any triggers or patterns?**
What might be contributing to these shifts? Could any of this be related to workplace conflict?

3. **NAVIGATE: I take the step that matches my needs.**

With a clearer picture, choose action(s) or support(s) that could fit your MHCM colours and needs. Use the linked Health Resource Directory to find tools and supports.

In any colour, If in doubt, consult a healthcare professional.

- ➔ **Green/Healthy:** Stay steady with proactive maintenance and supportive routines,
- ➔ **Yellow/Reacting:** Recognize limits, apply self-directed care and healthy coping skills,
- ➔ **Orange/Injured:** Reach out and talk to someone you trust. Seek professional support.
- ➔ **Red/Ill:** Get help by following professional guidance and accessing immediate support

How to Complete a Self-Check:

- ☐ Reflect over the past week to month, not just today.
- ☐ Expect movement across colours
- ☐ Think of this as a snapshot of where you're at now.

This is not a diagnostic tool – it's about awareness.

If in doubt, consult a healthcare professional.
